List of abbreviations

<b>1. Introduction</b>	1
<b>2. Literature review</b>	3
2.1. Aquaculture – a tool for sustainability	3
2.2. Milkfish aquaculture in Southeast Asia, with special focus on the Philippines	5
2.2.1. Historical overview and economic development	5
2.2.2. Production systems	8
2.2.3. Culture methods	11
2.3. Biology of the milkfish	14
2.3.1. Occurrence and life cycle	14
2.3.2. Growth of milkfish	15
2.3.3. Feeding and nutrition	16
2.4. Modelling in aquaculture – estimating the food consumption in fish	21
2.5. Bioenergetics in fish with special reference to milkfish <i>Chanos chanos</i>	23
2.6. Internal parameters of natural food from milkfish ponds	25
<b>3. Materials and methods</b>	26
3.0. Preliminary remark	26
3.1. Methods applied during pond monitoring in Dumangas, Philippines to determine the intake of natural food and supplemental feeds of juvenile milkfish in an intensively managed brackishwater pond	26
3.1.1. Pond layout, management and supplements	26
3.1.2. Data collection during the pond monitoring	28
3.1.2.1. Monitoring of the weather conditions	28
3.1.2.2. Sampling and analysis of pond water	28
3.1.2.3. Sampling and analysis of <i>lumut</i> and plankton	29
3.1.2.4. Sampling of milkfish and determination of morphometric parameters	29
3.1.2.5. Body composition analysis of milkfish	31
3.1.2.6. Analysis of stomach content	32

3.1.2.7. Chemical analysis of fish, supplemental feed and natural food samples	34
3.1.3. Calculation of diet intake of supplemental feed and natural food with the Elliott-Persson model	34
3.2. Methods used in laboratory studies with milkfish fingerlings in a respiratory system at SEAFDEC Main Station	36
3.2.1. Experimental design and maintenance of the setup	36
3.2.2. Preparation of supplemental feed and natural food	39
3.2.3. Acclimatisation and stocking of milkfish in the respiration system	41
3.2.4. Feeding of milkfish fingerlings during respiratory experiments	43
3.2.5. Calculations on growth, survival, oxygen consumption, feed- and energy utilisation	43
3.3. Specific methods during pond monitorings in Banate and La Paz, Philippines to determine the intake of natural food of juvenile milkfish in commercial semi-intensively used brackishwater ponds	45
3.3.1. Fish farm, pond layout and management	45
3.3.2. Feeding with supplemental feed during pond monitorings	50
3.3.3. Sampling, monitoring and analysis of water, soil and fish	50
3.3.3.1. Monitoring, sampling and analysis of the weather conditions and water samples	50
3.3.3.2. Sampling and analysis of soil	52
3.3.3.3. Sampling, monitoring and analysis of milkfish	52
3.3.4. Chemical analysis of amino acids, fatty acids, chlorophyll, carotenoids, minerals and trypsin inhibitor	53
3.3.4.1. Analysis of amino acid composition in supplemental diets and natural food samples	53
3.3.4.2. Analysis of fatty acid composition in milkfish and diet samples	53
3.3.4.3. Analysis of chlorophyll and carotenoids in algal matter of natural food from different ponds	54
3.3.4.4. Analysis of mineral concentration in natural food	54
3.3.4.5. Trypsin inhibitor assay for natural food from milkfish ponds	54
<b>4. Results</b>	<b>56</b>
4.1. Results from monitoring a practical grow-out period in an intensively managed pond in Dumangas	56
4.1.1. Seasonal conditions	56
4.1.2. Water conditions	56
4.1.3. Abundance, distribution and proximate composition of natural food	57
4.1.4. Growth of fish in brackishwater pond	59
4.1.5. Food quantities in the stomach of fish	61

4.1.6. Calculation of daily ration	63
4.1.7. Carcass composition of milkfish	65
4.1.8. Uptake efficiency of supplemental feed in pond-reared milkfish in Dumangas	66
4.2. Results from the respiration experiments conducted under different simulated pond conditions	67
4.2.1. Growth and survival of milkfish fingerlings	67
4.2.2. Development of body composition in juvenile milkfish	70
4.2.3. Oxygen consumption and energy budgets in tested fish	73
4.3. Results from monitoring commercial semi-intensive milkfish farms in Banate and La Paz	79
4.3.1. Environmental conditions – weather and water	79
4.3.2. Soil quality of fish ponds	83
4.3.3. Abundance and quality of natural food	84
4.3.4. Amino acid, fatty acid, carotenoid, mineral and chlorophyll profile of algal matter	89
4.3.5. Growth of milkfish in commercial farms	101
4.3.6. Diet uptake and daily ration of milkfish	104
4.3.7. Body composition of milkfish	119
4.3.8. Fatty acid profile of milkfish	120
4.3.9. Uptake efficiency of natural food in pond-reared milkfish in Banate and La Paz	124
<b>5. Discussion</b>	126
5.1. Intensive system - Dumangas	126
5.2. Laboratory studies	129
5.3. Semi-intensive system – La Paz / Banate	133
<b>6. Conclusions and outlook</b>	140
<b>7. Summary / Zusammenfassung</b>	141
7.1. Summary	141
7.2. Zusammenfassung	144
<b>8. References</b>	148
<b>9. Appendix</b>	166
